SUMMARY

Design-minded software engineer with 5+ years of experience building intuitive products across iOS and web. Experienced turning ambiguous ideas into polished, production-ready experiences by combining product strategy, interaction design, and engineering.

EXPERIENCE

Frontend Software Engineer | TIFIN | New York, NY | May 2025 - March 2026

- Owned the end-to-end product experience for advisor-facing wealth management tools, partnering across product and engineering to simplify complex financial workflows into intuitive, scalable user experiences.
- Built portfolio analysis experiences that enabled advisors to explore investments through interactive visualizations, advanced search, and intelligent filtering, making complex financial data easier to understand and act on.
- Evolved the platform's design system into a scalable UI foundation, accelerating feature development and ensuring a consistent experience across multiple products.
- Designed AI-assisted engineering workflows by creating reusable agent instructions, prompting standards, and development playbooks that streamlined frontend implementation and accelerated product iteration.

Full-stack Engineer | Comet ML | Tel Aviv, Israel / New York, NY | June 2021 - April 2025

- Developed responsive user interfaces using modern front-end libraries such as React, Redux, and Material-UI.
- Created and managed scalable RESTful APIs with Spring, enhancing database interactions and optimizing CRUD operations.
- Conducted unit and functional testing with JUnit, Jest, and Playwright, ensuring high-quality and secure code.
- Led a TypeScript migration project, improving code quality and reducing runtime errors by 15%.
- Reverse-engineered legacy systems to validate undocumented requirements, enhancing system performance and maintainability.
- Led the migration from Redux to React Query, enhancing data management with built-in caching, reducing development time for new features by 15%.
- Created interactive charts using Plotly.js to visualize AI model insights, enhancing data interpretation and user engagement.
- Designed and implemented a feature toggle manager in Golang, streamlining internal operations.
- Collaborated effectively with cross-functional teams, including project managers, and UI/UX designers, to align project goals.
- Participated in peer code reviews, emphasizing code quality, security, and adherence to best practices.
- Transferred to the US to support client-facing projects, providing technical support to enhance client satisfaction.

Frontend Engineer | Copyleaks | Remote | January 2019 - June 2021

- Designed and built a reusable Storybook design system adopted across multiple products.
- Developed scalable frontend architecture and reusable UI components for enterprise web applications.
- Collaborated with cross-functional teams to rapidly deliver customer-facing features through iterative product development.

PROJECTS

Snagr | apps.apple.com/us/app/snagr-live-dining-watchlists/id6783079978

- Built Snagr, a native SwiftUI app that transforms restaurant discovery into collaborative dining plans with live reservation availability, taking the product from idea to App Store launch through product strategy, UX, visual design, engineering architecture, AI-assisted development, and automated CI/CD.

Peel | getpeel.co/

- Built Peel, an AI-powered commercial real estate platform that helps brokers discover properties, understand ownership, and identify opportunities through intuitive search and exploration, leading the product strategy, information architecture, interaction design, and frontend architecture to make complex property data clear and actionable.
