PROFESSIONAL OVERVIEW

Design Engineer with 5+ years of experience bridging interaction design and frontend engineering across web and iOS. Owns the full arc from visual concept and prototyping to production-ready UI, with deep experience building design systems, data-intensive interfaces, and AI-assisted development workflows. Brings unusually high craft to financial and data-heavy products where precision, performance, and elegance all matter.

SKILLS

React · Next.js · TypeScript · JavaScript · HTML · CSS · GraphQL · Git · Figma · Design Systems · AI-Assisted Workflows · Prototyping in Code · Motion & Micro-interactions · Product Instincts · Data-Intensive Interfaces

WORK EXPERIENCE

FRONTEND ENGINEER | TIFIN, New York

MAY 2025 – MAR 2026

- Led adoption of Vercel AI SDK and AI Elements across frontend and backend, establishing shared patterns for streaming, chat state, and reusable AI UI components — reducing custom implementation and accelerating delivery of new AI experiences.
- Refactored the frontend into a Feature-Sliced Design architecture, reorganizing a growing React codebase around clear feature boundaries, shared primitives, and predictable dependency rules — reducing cross-feature coupling and making new features faster and safer to ship.
- Owned advisor-facing portfolio analysis workflows from product definition through production, building interactive visualizations, advanced search, and filtering that turned complex investment data into clear, actionable interfaces.
- Built AI-assisted engineering infrastructure including reusable agent instructions, prompting standards, and development playbooks, creating a consistent workflow for using AI across frontend development and accelerating implementation and iteration.

FRONTEND ENGINEER | Comet ML, New York, Tel Aviv

JUNE 2021 – MAY 2025

- Led the migration from Redux-managed server state to React Query, introducing standardized caching, invalidation, and synchronization patterns that simplified the frontend data layer and reduced development time for new features by 15%.
- Drove a JavaScript-to-TypeScript migration across a mature frontend codebase, establishing shared typing patterns and reducing runtime errors by 15%.
- Built data-intensive ML interfaces with React and Material UI, including interactive Plotly.js visualizations for exploring model performance and experiment results.
- Designed and shipped a self-service feature-toggle UI backed by Golang, replacing direct JSON configuration so non-technical teams could safely control feature rollouts without engineering support.

DESIGN ENGINEER | Copyleaks, Tel Aviv

JAN 2019 - JUN 2021

- Designed and built a reusable Storybook design system adopted across multiple products.
- Developed scalable frontend architecture and reusable UI components for enterprise web applications.
- Collaborated with cross-functional teams to rapidly deliver customer-facing features through iterative product development.

ISRAELI AIR FORCE (IAF) | Photographer & Graphic Designer

SEP 2016 - SEP 2018

EDUCATION

UNIVERSITY OF WARWICK | Bachelor of Science, Computer Science

2018 - 2021

BEIJING FILM ACADEMY | Cinematography

2015-2016
